Report on Webinar

Title of the Webinar : Virtual Academy: "Glimpses of Digital Signal Processing"

Date & Time : Fri, Aug 28, 2015 3:30 PM - 4:30 PM IST

Presenter :**Prof. Narayan Marathe**, Associate Professor in Electronics, Walchand College of Engineering, Sangli.

Abstract :

Digital Signal Processing is a key subject having applications across all the Engineering domains. However the conventional approach of explanation is found to be quite inadequate to bring about the expected level of clarity to undergraduate students. A new pedagogical approach is necessary to ensure that undergraduate students are able to understand this important subject appropriately in a simple manner. This Webinar Course deals with a novel approach to explain various complex themes in this subject with supporting Graphical Representations. This Webinar Course unfolds this crucial subject in such a manner that even a student with 10+2 background only will be able to understand it independently. After the first introductory lecture the participants will be able to access the Course Webpage created for follow up of the lecture and background work for the next lecture.
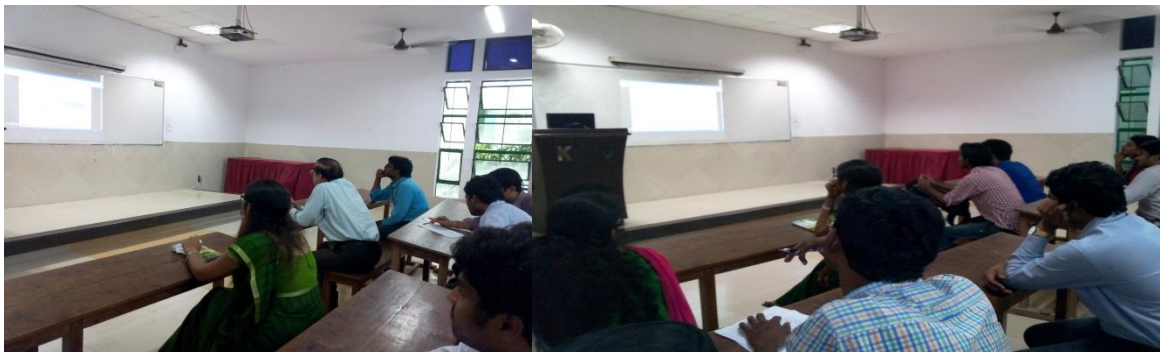

Attendance Details :
The above webinar is conducted for both **Faculty of EEE and UG Programmes**.

Faculty :08
UG students :05
