

**K L University**  
**Department of Mechanical Engineering**  
**Course Structure for M.Tech. (Mechatronics)**  
**Academic Year: 2013 – 2014**

**First year (First Semester)**

S.No.	Course Title	Periods			Contact Hours	Credits
		L	T	P		
1.	Fundamentals of Mechatronics	3	0	0	3	3
2.	Advanced Engineering Mathematics	3	1	0	4	4
3.	Sensors and Actuators	3	0	0	3	3
4.	Modeling and Simulation of Mechatronic Systems	3	1	0	4	4
5.	Elective I- I	3	0	0	3	3
6.	Elective II-I	3	0	0	3	3
7.	Mechatronics Lab-I	0	0	2	2	2
8.	Seminar	0	0	2	2	2
<b>Total Credits</b>						<b>24</b>

**First year (Second Semester)**

S.No.	Course Title	Periods			Contact Hours	Credits
		L	T	P		
1.	Robotics: Advanced Concepts and Analysis	3	0	0	3	3
2.	Control of Mechatronic Systems	3	0	0	3	3
3.	Mechatronics Product Design	3	1	0	4	4
4.	Precision Engineering	3	1	0	4	4
5.	Elective I-II	3	0	0	3	3
6.	Elective II-II	3	0	0	3	3
7.	Mechatronics Lab II	0	0	2	2	2
8.	Term Paper	0	0	2	2	2
<b>Total Credits</b>						<b>24</b>

**Second Year (Third Semester & Fourth Semester)**

S.NO.	Course Title	Periods			Contact Hours	Credits
		L	T	P		
1.	Major Project	0	0	0	-	36
<b>Total Credits</b>						<b>36</b>

**Elective-I**

1. Computational Fluid Dynamics
2. Signal Processing in Mechatronic Systems
3. Nonlinear Optimization
4. MEMS and NEMS

**Elective-II**

1. Industrial Automation
2. Vehicle Dynamics and Multi-body Systems
3. Emerging Smart Materials for Mechatronics Applications
4. Intelligent Visual Surveillance
5. Microprocessors and Embedded Systems
6. Fuzzy Sets and Artificial Intelligence

*\*Credits will be fixed as and when the Curriculum and detailed Syllabus structure is approved by the BoS and the Academic Council*

# Fundamentals of Mechatronics

**Module I:** Introduction: Definition of Mechatronics, Mechatronics in manufacturing, Products, and design. Comparison between Traditional and Mechatronics approach.

**Module II:** Review of fundamentals of electronics. Data conversion devices, sensors, microsensors, transducers, signal processing devices, relays, contactors and timers. Microprocessors controllers and PLCs.

**Module III:** Drives: stepper motors, servo drives. Ball screws, linear motion bearings, cams, systems controlled by camshafts, electronic cams, indexing mechanisms, tool magazines, transfer systems.

**Module IV:** Hydraulic systems: flow, pressure and direction control valves, actuators, and supporting elements, hydraulic power packs, pumps. Design of hydraulic circuits. Pneumatics: production, distribution and conditioning of compressed air, system components and graphic representations, design of systems. Description

**Module V:** Description of PID controllers. CNC machines and part programming. Industrial Robotics.

## Texts:

- HMT ltd. Mechatronics, Tata Mcgraw-Hill, New Delhi, 1988.
- G.W. Kurtz, J.K. Schueller, P.W. Claar . II, Machine design for mobile and industrial applications, SAE, 1994.
- T.O. Boucher, Computer automation in manufacturing - an Introduction, Chappman and Hall, 1996.
- R. Iserman, Mechatronic Systems: Fundamentals, Springer, 1st Edition, 2005
- Musa Jouaneh, Fundamentals of Mechatronics, 1st Edition, Cengage Learning, 2012.

## Advanced Engineering Mathematics

**Linear Algebra:** Matrix algebra; basis, dimension and fundamental subspaces; solvability of  $Ax = b$  by direct Methods; orthogonality and QR transformation; eigenvalues and eigenvectors, similarity transformation, singular value decomposition, Fourier series, Fourier Transformation, FFT.

**Vector Algebra & Calculus:** Basic vector algebra; curves; grad, div, curl; line, surface and volume integral, Green's theorem, Stokes's theorem, Gauss-divergence theorem.

**Differential Equations:** ODE: homogeneous and non-homogeneous equations, Wronskian, Laplace transform, series solutions, Frobenius method, Sturm-Liouville problems, Bessel and Legendre equations, integral transformations; PDE: separation of variables and solution by Fourier Series and Transformations, PDE with variable coefficient.

**Numerical Technique:** Numerical integration and differentiation; Methods for solution of Initial Value Problems, finite difference methods for ODE and PDE; iterative methods: Jacobi, Gauss-Siedel, and successive over-relaxation.

**Complex Number Theory:** Analytic function; Cauchy's integral theorem; residue integral method, conformal mapping.

**Statistical Methods:** Descriptive statistics and data analysis, correlation and regression, probability distribution, analysis of variance, testing of hypothesis.

### Text Books:

- H. Kreyszig, "Advanced Engineering Mathematics", Wiley, (2006).

- R. A. Johnson and G. K. Bhattacharya, "Statistics, Principles and Methods", Wiley (2008).

## Sensors and Actuators

Brief overview of measurement systems, classification, characteristics and calibration of different sensors. Measurement of displacement, position, motion, force, torque, strain gauge, pressure flow, temperature sensor sensors, smart sensor. Optical encoder, tactile and proximity, ultrasonic transducers, opto-electrical sensor, gyroscope. Principles and structures of modern micro sensors, micro-fabrication technologies: bulk micromachining, surface micromachining, LIGA, assembly and packaging.

**Pneumatic and hydraulic systems:** actuators, definition, example, types, selection. Pneumatic actuator. Electro-pneumatic actuator. Hydraulic actuator, control valves, valve sizing valve selection. Electrical actuating systems: solid-state switches, solenoids, voice coil; electric motors; DC motors, AC motors, single phase motor; 3-phase motor; induction motor; synchronous motor; stepper motors. Piezoelectric actuator: characterization, operation, and fabrication; shape memory alloys.

### **Text Books**

- John G. Webster, Editor-in-chief, "Measurement, Instrumentation, and Sensors Handbook", CRC Press (1999).
- Jacob Fraden, "Handbook of modern Sensors", AIP Press, Woodbury (1997).
- Nadim Maluf, "An Introduction to Microelectromechanical Systems Engineering", Artech House Publishers, Boston (2000).

- Gregory Kovacs, "Micromachined Transducers Sourcebook", McGraw-Hill, New York (1998).
- E. O. Deobelin and D. Manik, "Measurement Systems – Application and Design", Tata McGraw-Hill (2004).
- D. Patranabis, "Principles of Industrial Instrumentation", Tata McGraw-Hill, eleventh reprint (2004).
- B. G. Liptak, "Instrument Engineers' Handbook: Process Measurement and Analysis", CRC (2003).

# Modeling and Simulation of Mechatronic Systems

**Physical Modelling:** Mechanical and electrical systems, physical laws, continuity equations, compatibility equations, system engineering concept, system modelling with structured analysis, modelling paradigms for mechatronic system, block diagrams, mathematical models, systems of differential-algebraic equations, response analysis of electrical systems, thermal systems, fluid systems, mechanical rotational system, electrical-mechanical coupling.

**Simulation Techniques:** Solution of model equations and their interpretation, zeroth, first and second order system, solution of 2nd order electro-mechanical equation by finite element method, transfer function and frequency response, non-parametric methods, transient, correlation, frequency, Fourier and spectra analysis, design of identification experiments, choice of model structure, scaling, numeric methods, validation, methods of lumped element simulation, modelling of sensors and actuators, hardware in the loop simulation (HIL), rapid controller prototyping, coupling of simulation tools, simulation of systems in software (MATLAB, LabVIEW) environment.

## Modelling and Simulation of Practical Problems:

- Pure mechanical models
- Models for electromagnetic actuators including the electrical drivers
- Models for DC-engines with different closed loop controllers using operational amplifiers
- Models for transistor amplifiers
- Models for vehicle system

## Text Books:

- L. Ljung, T. Glad, "Modeling of Dynamical Systems", Prentice Hall Inc. (1994).
- D.C. Karnopp, D.L. Margolis and R.C. Rosenberg, "System Dynamics: A Unified Approach", 2nd Edition, Wiley-Interscience (1990).
- G. Gordon, "System Simulation", 2nd Edition, PHI Learning (2009).
- V. Giurgiutiu and S. E. Lyshevski, "Micromechatronics, Modeling, Analysis, and Design with MATLAB", 2nd Edition, CRC Press (2009).

# Robotics: Advanced Concepts and Analysis

**Introduction to robotics:** brief history, types, classification and usage and the science and technology of robots.

**Kinematics of robot:** direct and inverse kinematics problems and workspace, inverse kinematics solution for the general 6R manipulator, redundant and over-constrained manipulators.

**Velocity and static analysis of manipulators:** Linear and angular velocity, Jacobian of manipulators, singularity, static analysis.

**Dynamics of manipulators:** formulation of equations of motion, recursive dynamics, and generation of symbolic equations of motion by a computer simulations of robots using software and commercially available packages.

**Planning and control:** Trajectory planning, position control, force control, hybrid control  
Industrial and medical robotics: application in manufacturing processes, e.g. casting, welding, painting, machining, heat treatment and nuclear power stations, etc; medical robots: image guided surgical robots, radiotherapy, cancer treatment, etc;

**Advanced topics in robotics:** Modelling and control of flexible manipulators, wheeled mobile robots, bipeds, etc. Future of robotics.

## Reference Books

- K. S. Fu, R. C. Gonzalez and C.S.G. Lee, “ROBOTICS: Control, Sensing, Vision and Intelligence”, McGraw-Hill (1987).
- J. J. Craig, “Introduction to Robotics: Mechanics and Control”, 2nd edition, Addison-Wesley (1989).

## Control of Mechatronic Systems

**Time response design:** Routh-Hurwitz test, relative stability, Root locus design, construction of root loci, phase lead and phase-lag design, lag-lead design.

**Frequency response design:** Bode, polar, Nyquist, Nichols plot, lag, lead, lag-lead compensator, time delay, process plant response curve. PID controller design.

**Modern control:** Concept of states, state space model, different form, controllability, observability; pole placement by state feedback, observer design, Lunenburg observer, reduced order observer, observer based control.

**Optimal control design:** Solution-time criterion, control-area criterion, performance indices; zero steady state step error systems; modern control performance index: quadratic performance index, Ricatti equation.

**Digital control:** Sampling process, sample and hold, analog to digital converter, use of z-transform for closed loop transient response, stability analysis using bilinear transform and Jury method, digital control design using state feedback.

**Non-Linear Control System:** Common physical non-linear system, phase plane method, system analysis by phase plane method, stability of non-linear system, stability analysis by describing function method, Liapunov's stability criterion, Popov's stability criterion.

### **Text Books:**

- H.K. Khalil, "Nonlinear Systems", Prentice Hall (2001).

## **Mechatronic Product Design**

**Introduction:** Integrated Design issues in Mechatronics, Mechatronics Design process, Mechatronics Key Elements, Applications in Mechatronics.

**Modeling and simulation of physical systems:**Electrical systems, Mechanical systems-translational&rotational systems, fluid systems.

**Sensors and Transducers:** Introduction, sensor for motion and position measurement, force, torque and tactile sensors, vibration – Acceleration sensors, sensor for flow measurement, temperature sensing devices, sensor applications.

**Actuating Devices:**DC Motors, Stepper motors, fluid power Actuation, fluid power design elements, piezoelectric Actuators.

**System Control – Logic Methods:** Number Systems in Mechatronics, Binary Logic, Karnaugh Map Minimization, Programmable Logic Controllers.

**Signal Conditioning and Real Time Interfacing:** Elements of a Data Acquisition and Control System, Transducers and Signal Conditioning, Devices for Data Conversion, Data Conversion Process.

### **Case Studies**

#### **TEXT BOOKS:**

1. DevdasShetty, Richard A.Kolk, “Mechatronics System Design”, PWS Publishing Company, 1997.
2. Boltan, “Mechatronics-Electronic Control Systems in Mechanical and Electrical Engineering”, 2nd Edition, Addison Wesley Longman Ltd., 1999

#### **REFERENCE BOOK:**

1. D.A Bradley, D.Dawson, N.C Burd and A.J.Loader, “Mechatronics” CRC Press, 2010.

## **Precision Engineering**

### **Concept of Accuracy and Accuracy of NC Systems:**

Introduction-General concept of accuracy of machine tool-spindle rotation accuracy-Displacement accuracy-Influence of Geometric Accuracy of Machine Tools on Work piece Accuracy-Definition of Accuracy of NC system-Errors due to Numerical Interpolation-Errors due to displacement measurement system-Periodic errors-Errors due to velocity Lags-Transient Response.

### **Geometric Dimensioning and Tolerancing:**

Tolerance Zone Conversions – Surfaces, Features, Features of Size, Datum Features – Datum Oddly Configured and Curved Surfaces as Datum Features, Equalizing Datums –Datum Feature of Representation – Form Controls, Orientation Controls – Logical Approach to Tolerancing.

### **Tolerances and Fits:**

Sign convention-Tolerance zone-Fits-Basic Hole System of fits-Standards of Limits and Fits-Expected accuracy of a manufacturing process-Commonly used classification of types of fits-Tolerances and Fits for bearings-Methods of specifying Fits on splined shafts and holes-Selective assembly-Gauges for the control of distances between axes.

### **Surface Roughness and Micro finishing Processes:**

Relation among the various indices of surface roughness-Ideal and Final Roughness in Machining-Influence of machining parameters on surface roughness-Ideal surface roughness in slab milling-Bearing area curves-Micro finishing processes in the machining of metals.

### **Methods of Improving accuracy and surface finish:**

Concept of precision Machining-Finish Turning, Boring and Grinding-Precision Cylindrical Grinding-Internal Cylindrical Grinding-Errors in shape of surface grinding

### **Applications and Future Trends in Nano Technology:**

Nano-grating system-Nanolithography, photolithography, electron beam lithography- Machining of soft metals, diamond turning, mirror grinding of ceramics-Development of intelligent products-Nano processing of materials for super high density Ics-Nano-mechanical parts and micromachines.

### **TEXT BOOKS:**

1. Precision Engineering in Manufacturing / murthy R. L., / New Age International(P) limited,1996.
3. Geometric Dimensioning and Tolerancing / James D.Meadows / Marcel Dekker Inc.1995.
5. Norio Taniguchi,- " Nano Technology ", Oxford university,Press,1996.

### **REFERENCE BOOKS:**

1. Precision Engineering- V. C. Venkatesh, & Sudin Izman/ Tata McGraw-Hill

## Elective Courses (Elective I)

### Computational Fluid Dynamics

**Concept of Computational Fluid Dynamics:** Different techniques of solving fluid dynamics problems, their merits and demerits, governing equations of fluid dynamics and boundary conditions, classification of partial differential equations and their physical behavior, Navier-Stokes equations for Newtonian fluid flow, computational fluid dynamics (CFD) techniques, different steps in CFD techniques, criteria and essentialities of good CFD techniques.

**Finite Difference Method (FDM):** Application of FDM to model problems, steady and unsteady problems, implicit and explicit approaches, errors and stability analysis, direct and iterative solvers. **Finite Volume Method (FVM):** FVM for diffusion, convection-diffusion problem, different discretization schemes, FVM for unsteady problems.

**Prediction of Viscous Flows:** Pressure Poisson and pressure correction methods for solving Navier-Stokes equation, SIMPLE family FVM for solving Navier-Stokes equation, modelling turbulence.

**CFD for Complex Geometry:** Structured and unstructured, uniform and non-uniform grids, different techniques of grid generations, curvilinear grid and transformed equations.

**Lattice Boltzman and Molecular Dynamics:** Boltzman equation, Lattice Boltzman equation, Lattice Boltzman methods for turbulence and multiphase flows, Molecular interaction, potential and force calculation, introduction to Molecular Dynamics algorithms.

## Signal Processing in Mechatronic Systems

**Discrete- Time Signals:** Sequences; representation of signals on orthogonal basis; Sampling and Reconstruction of signals

**Discrete systems:** Z-Transform, Analysis of LSI systems, Frequency Analysis, Inverse Systems, Discrete Fourier Transform (DFT), Fast Fourier Transform algorithm, Implementation of Discrete Time Systems.

**Frequency selective filters:** Ideal filter characteristics, lowpass, highpass, bandpass and bandstop filters, Paley-Wiener criterion, digital resonators, notch filters, comb filters, all-pass filters, inverse systems, minimum phase, maximum phase and mixed phase systems.

**Design of FIR and IIR filters:** Design of FIR filters using windows, frequency sampling, Design of IIR filters using impulse invariance, bilinear transformation and frequency transformations, Butterworth, Chebyshev Filters.

**Introduction to multi-rate signal processing:** Decimation, interpolation, polyphase decomposition; digital filter banks: Nyquist filters, two channel quadrature mirror filter bank and perfect reconstruction filter banks, subband coding.

**Introduction to DSP Processors:** Introduction to various Texas processors such as TMS320C6713, TMS320C6416, DM6437 Digital Video Development Platform with Camera, DevKit8000 OMAP3530 Evaluation Kit.

**Applications:** Application of DSP to Speech and Radar signal processing, A few case studies of DSP applications in multimedia using TI DSP kits.

## Nonlinear Optimization

**Nonlinear programming:** Convex sets and convex functions, their properties, convex programming problem, generalized convexity, Pseudo and Quasi convex functions, Invex functions and their properties, KKT conditions.

**Goal Programming:** Concept of Goal Programming, Model Formulation, Graphical solution method.

**Separable programming. Geometric programming:** Problems with positive coefficients up to one degree of difficulty, Generalized method for the positive and negative coefficients.

**Search Techniques:** Direct search and gradient methods, Unimodal functions, Fibonacci method, Golden Section method, Method of steepest descent, Newton-Raphson method, Conjugate gradient methods.

**Dynamic Programming:** Deterministic and Probabilistic Dynamic Programming, Discrete and continuous dynamic programming, simple illustrations.

**Multiobjective Programming:** Efficient solutions, Domination cones.

## MEMS and NEMS

**Micro and nano mechanics** – principles, methods and strain analysis, an introduction to microsensors and MEMS, Evolution of Microsensors & MEMS, Microsensors & MEMS applications, Microelectronic technologies for MEMS, Micromachining Technology – Surface and Bulk Micromachining, Micromachined Microsensors, Mechanical, Inertial, Biological, Chemical, Acoustic, Microsystems Technology, Integrated Smart Sensors and MEMS, Interface Electronics for MEMS, MEMS Simulators, MEMS for RF Applications, Bonding & Packaging of MEMS, Conclusions & Future Trends.

**Nanoelectromechanical systems (NEMS)** – a journey from MEMS to NEMS, MEMS vs. NEMS, MEMS based nanotechnology – fabrication, film formation and micromachining, NEMS physics – manifestation of charge discreteness, quantum electrodynamical (QED) forces, quantum entanglement and teleportation, quantum interference, quantum resonant tunneling and quantum transport, Wave phenomena in periodic and aperiodic media – electronic and photonic band gap crystals and their applications, NEMS architecture, Surface Plasmon effects and NEMS fabrication for nanophotonics and nanoelectronics, Surface Plasmon detection – NSOM/SNOM

## **Elective Courses (Elective II)**

### **Industrial Automation**

Automation: Introduction, automation principles and strategies, basic elements of advanced functions, levels modeling of manufacturing systems.

Material handling: Introduction, material handling systems, principles and design, material transport system: transfer mechanisms automated feed cut of components, performance analysis, uses of various types of handling systems including AGV and its various guiding technologies.

Storage system: Performance, location strategies, conventional storage methods and equipments, automated storage systems.

Automated manufacturing systems: Components, classification, overview, group technology and cellular manufacturing, parts classification and coding, product flow analysis, cellular manufacturing, application considerations in G.T.

FMS: Introduction, components, application, benefits, planning and implementation, transfer lines and fundamentals of automated production lines, application, analysis of transfer line without internal storage (numerical problems).

Inspection Technology: Introduction, contact and non-contact conventional measuring, gauging technique, CMM, surface measurement, machine vision, other optical inspection techniques, non-contact non-optical inspection technologies versus.

Manufacturing support system: Process planning and concurrent engineering- process planning, CAPP, CE and design for manufacturing, advanced manufacturing planning, production planning and control system, master production schedule, MRP.

Capacity planning, shop floor control, inventory control, MRP-II, J.I.T production systems. lean and agile manufacturing.

## Vehicle Dynamics and Multi-body Systems

**Introduction to vehicle dynamics:** Vehicle coordinate systems; loads on axles of a parked car and an accelerating car. Acceleration performance: Power-limited acceleration, traction-limited acceleration.

**Tire models:** Tire construction and terminology; mechanics of force generation; rolling resistance; tractive effort and longitudinal slip; cornering properties of tire; slip angle; camber thrust; aligning moments.

**Aerodynamic effects on a vehicle:** Mechanics of airflow around the vehicle, pressure distribution, aerodynamic forces; pitching, rolling and yawing moments; crosswind sensitivity.

**Braking performance:** Basic equations for braking for a vehicle with constant deceleration and deceleration with wind-resistance; braking forces: rolling resistance, aerodynamic drag, driveline drag, grade, tire-road friction; brakes, anti-lock braking system, traction control, braking efficiency.

**Steering systems and cornering:** Geometry of steering linkage, steering geometry error; steering system models, neutral steer, under-steer, over-steer, steering ratio, effect of under-steer; steering system force and moments, low speed and high speed cornering; directional stability of the vehicle; influence of front-wheel drive.

**Suspension and ride:** Suspension types—solid axle suspensions, independent suspensions; suspension geometry; roll centre analysis; active suspension systems; excitation sources for vehicle rider; vehicle response properties, suspension stiffness and damping, suspension isolation, active control, suspension non-linearity, bounce and pitch motion.

**Roll-over:** Quasi-static roll-over of rigid vehicle and suspended vehicle; transient roll-over, yaw-roll model, tripping.

**Multi-body systems:** Review of Newtonian mechanics for rigid bodies and system of rigid bodies; coordinate transformation between two set of axes in relative motion between one another; Euler angles; angular velocity, angular acceleration, angular momentum etc. in terms of Euler angle parameters; Newton-Euler equations of motion; elementary Lagrangian mechanics: generalised coordinates and constraints; principle of virtual work; Hamilton's principle; Lagrange's equation, generalized forces. Lagrange's equation with constraints, Lagrange's multiplier.

## **Emerging Smart Materials for Mechatronics Applications**

**Introduction:** Smart materials and their application for sensing and actuation, Mechatronics aspects.

**Piezoelectric materials:** Piezoelectricity and piezoelectric materials, Constitutive equations of piezoelectric materials, Piezoelectric actuator types, Control of piezoelectric actuators, Applications of piezoelectric actuators for precise positioning and scanning.

**Shape memory alloys (SMA):** Properties of shape memory alloys, Shape memory effects, Pseudo-elasticity in SMA, Design of shape memory actuator, selection of materials, Smart actuation and control, Applications of SMA in precision equipments for automobiles, trains and medical devices.

**Electro-active polymers (EAPs):** Ionic polymer metal composites (IPMC), Conductive polymers, Carbon nanotubes, Dielectric elastomers, Design & control issues for EAP actuators, Applications of EAP for biomimetic, tactile display and medical devices.

**Magnetostrictive materials:** Basics of magnetic properties of materials, magnetostriction: constitutive equations, types of magnetostrictive materials, Design & control of magnetostrictive actuators, Applications of magnetostrictive materials for active vibration control.

**Summary, conclusion and future outlook:** Comparative analysis of different smart materials based actuators, Conclusions, Future research trend and applications trends of smart materials and smart materials based actuator technology.

# Intelligent Visual Surveillance

**Basics of Image Processing:** Introduction to Image Processing methods, Image Transforms, Wavelet Transform, JPEG Image Compression, Image Formats, Color Spaces- RGB, CMY, HSI.

**Video Compression Standards:** H. 261, H. 263, H.264, MPEG-1, MPEG-2, MPEG-4, MPEG-7, and MPEG-21, Video shot boundary detection, motion modeling and segmentation techniques.

**Object Detection and Classification-** Shape based object classification, motion based object classification, Silhouette-Based Method for Object Classification, Viola Jones object detection framework, Multiclass classifier boosting.

**Multi-Object Tracking-** Classification of multiple interacting objects from video, Region-based Tracking, Contour-based Tracking, Feature-based Tracking, Model-based Tracking, Hybrid Tracking, Particle filter based object tracking, Mean Shift based tracking, Tracking of multiple interacting objects.

**Human Activity Recognition-** Template based activity recognition, Sequential recognition approaches using state models (Hidden Markov Models), Human Recognition Using Gait, HMM Framework for Gait Recognition, Description based approaches, Human interactions, group activities, Applications and challenges.

**Camera Network Calibration -** Types of CCTV (closed circuit television) camera- PTZ (pan-tilt zoom) camera, IR (Infrared) camera, IP (Internet Protocol) camera, wireless security camera, Multiple view geometry, camera network calibration, PTZ camera calibration, camera placement, smart imagers and smart cameras.

## Text Books

- Murat A. Tekalp, “Digital Video Processing”, Prentice Hall, 1995.
- Y. Ma and G. Qian (Ed.), “Intelligent Video Surveillance: Systems and Technology”, CRC Press, 2009.

# Microprocessors and Embedded Systems

**Introduction to Embedded Systems and microcomputers:** Introduction to Embedded Systems, Embedded System Applications, Block diagram of embedded systems, Trends in Embedded Industry, Basic Embedded system Models, Embedded System development cycle, Challenges for Embedded system Design, Evolution of computing systems and applications. Basic Computer architecture: Von-Neumann and Harvard Architecture. Basics on Computer organizations. Computing performance, Throughput and Latency, Basic high performance CPU architectures, Microcomputer applications to Embedded systems and Mechatronics.

**Microprocessor:** 8086 Microprocessor and its Internal Architecture, Pin Configuration and their functions, Mode of Operation, Introduction to I/O and Memory, Timing Diagrams, Introduction to Interrupts.

**Microprocessor Programming:** Introduction to assembly language, Instruction format, Assembly language programming format, Addressing mode, Instruction Sets, Programming 8086 microprocessor.

**Microprocessor Interfacing:** Introduction to interfacing, Memory Interfacing, Programmable Peripheral Interfacing, Programmable I/O, Programmable Interrupt Controller, Programmable Timers, Programmable DMA Controller, Programmable Key board Controller, Data acquisition Interfacing: ADC, DAC, Serial and parallel data Communication interfacing.

**Microcontroller:** Introduction to Microcontroller and its families, Criteria for Choosing Microcontroller. Microcontroller Architecture, Programming model, Addressing modes, Instruction sets, Assembly and C programming for Microcontroller, I/O programming using assembly and C language, Interrupt Controller, I/O interfacing, Timers, Real Time Clock, Serial and parallel Communication protocols, SPI Controllers. LCD Controller.

**Microcontroller Interfacing:** Introduction to Microcontroller Interfacing and applications: case studies: Display Devices, controllers and Drivers for DC, Servo and Stepper Motor.

**Introduction to Advanced Embedded Processor and Software:** ARM Processor, Unified Model Language (UML), Embedded OS, Real Time Operating System (RTOS), Embedded C.

**Microprocessor and Embedded system Laboratories:** Basic assembly language programming implementation on Microprocessor and Microcontroller. Interfacing Displays, Key boards and sensors with Microprocessors and Microcontrollers, Data Acquisition using Microprocessor and Microcontroller, Implementation of Controlling schemes for DC, Servo, Stepper motor using assembly and C programming in microprocessors and Microcontrollers.

## Books:

- Introduction to Embedded Systems: Shibu K V, McGRAW Hill Publications.
- Embedded Systems: Raj Kamal, TATA McGRAW Hill Publications.
- Computer System Architecture: M. Morris Mano.
- 8086 Microprocessors and Interfacings: D. Hall, TATA McGRAW Hill .
- The Intel Microprocessors: B. Brey, Prentice Hall Publications.
- PIC Microcontrollers and Embedded Systems: M. A. Mazidi, R.D. Mckinlay and D. Casey, Pearson Publications.
- Programming and Customizing the PIC Microcontroller: M. Predko, McGRAW Hill Publications.
- Embedded C Programming and Microchip PIC: R. Barnett, L. O’Cull and S. Cox

## **Fuzzy Sets and Artificial Intelligence**

Basic Concepts of Fuzzy Sets, Fuzzy Logic, Zadeh's Extension Principle, Operations on Fuzzy Sets, Fuzzy Measures, Probability and Possibility Measures, Fuzzy Inference Methodologies, Fuzzy Relations, Applications of Fuzzy Sets in Management, Decision Making, Medicine and Computer Science.

Introduction to Artificial Intelligence, Production System and Artificial Intelligence, Problem Solving by Search, Predicate Calculus, Knowledge Representation, Semantics Nets, Frames, Conceptual Dependencies, Knowledge Bases and Expert Systems, Fuzzy Rule, Neuro Fuzzy Approaches, Case Studies in Various Domain.

### **Texts:**

- S. Russell and P. Norvig, Artificial Intelligence: A Modern Approach, 2nd Ed, Prentice Hall, 2003.
- H.J.Zimmermann, Fuzzy Set Theory and Its Applications, 2nd Ed., Kluwer Academic Publishers, 1996.
- D.Dubois and H. Prade, Fuzzy Sets and Systems: Theory and Applications, Academic Press, 1980.

## **Mechatronic Laboratory-I**

Demonstration of mechatronics hardware; servo- position and velocity control; process control; basic programming using microprocessor/microcontroller; ADC and DAC interfacing with microcontroller/microprocessor; machine condition monitoring; development of multiple sensor fusion; image based navigation and control of robot; control of non-linear systems; machine vision inspection and image surveillance; mini-projects on mechatronic system design

## **Mechatronic Laboratory-II**

NC machine tool; sequence planning in CIM; automatic quality inspection in CIM; micro-processor/microcontroller based control; 3 DOF gyroscope; design and fabrication of piezo-actuator; hydraulic actuator; pneumatic actuator; design and characterization of optical sensor.
