A Report on Immunization Campaign

Conducted on 10-11-2020

(On Occasion of World Immunization Day)

KL Deemed to be University (Koneru Lakshmaiah Education Foundation) National Service Scheme (NSS) has conducted **“Immunization Campaign”** on **10th November 2020** at **Vaddeswaram** on occasion of **“World Immunization Day”** Faculty of KLEF and others been part of this event. They have given awareness regarding the immunity and its benefits. World Immunization Day is celebrated every year on November 10. This day is celebrated to make people aware about the importance of getting timely vaccinations against vaccine preventable diseases.

Immunization is the process whereby a person is made immune or resistant to an infectious disease, typically by the administration of a vaccine. Immunization helps protect the child from life threatening diseases. It also helps reduce the spread of disease to others. Vaccines stimulate the body's own immune system to protect the person against subsequent infection or disease. Babies are born with some natural immunity which they get from their mother through breast-feeding. This immunity gradually diminishes as the baby's own immune system starts to develop. Immunization is one of

the most cost-effective health investments and vaccination does not require any major lifestyle change.

Date of Event: 10-11-2020

Name of the Event: Immunization Campaign

Venue: Vaddeswaram

No. of Participants: Students: 24 Faculty: 25

According to WHO, Immunization is a proven tool for controlling and eliminating life-threatening infectious diseases and is estimated to avert between 2 and 3 million deaths each year but an estimated 18.7 million infants worldwide are still missing out on basic vaccines. India has one of the largest Universal Immunization Programs (UIP) in the world in terms of the quantities of vaccines used, number of beneficiaries covered, geographical spread and human resources involved.

Despite being operational for over 30 years, UIP has been able to fully immunize only 65% children in the first year of their life and the increase in coverage has stagnated. To achieve full immunization coverage for all children, the Government of India launched Mission Indradhanush in December 2014.

The ultimate goal of this program is to ensure full immunization with all available vaccines for children up to two years and pregnant women. Under this programme, all vaccines are available free of cost.
