KONERU LAKSHMAIH EDUCATION FOUNDATION

Deepak NEXGEN Feeds

Bommaluru, Krishna District, Andhra Pradesh, India

Biotechnology students were given an opportunity to visit Deepak NEXGEN Feeds Pvt.Ltd, Koyyur Road, Near Hanuman Junction, Bommuluru, Krishna Dt, Andhra Pradesh on January 28. A total strength of 175 students along with 5 faculty members visited the industry. DEEPAK NEXGEN FOODS AND FEEDS PRIVATE LIMITED is a Private Limited Company, incorporated under the Companies Act as a Company limited by Shares. It is classified as Non-govt company and is registered at RoC-Vijayawada.

The management has received and treated very well. Every staff of the industry explained the various steps involved in the preparation of feed for Fish (Floating food) and shrimp (Sinking food).Further, all of us are allowed to monitor in close how mixing, boiling, drying, pelleting, packing is done. Furthermore, quality of the feed that is produced by the industry will be checked in different quality control steps which was closely observed and learned by our students.

Deepak Nexgen foods and feed private limited is an unlisted private company incorporated on 24 august 2015. It is classified as a private company, and its authorized share capital is INR 22.66 crores. This company operates as a manufacturer of fish feed. The management has offered lunch to all of us followed by a presenting their future goals for 2020. The founder of the company and CEO addressed all of us and explained their company to the micro level. The students learnt so many things on that day, especially the importance of hard work, how the company has emerged to be one of the topmost companies from a small pilot lab. Probiotics are provided as an aquatic feed that can act as the source of nutrients and enzymes that can help in better digestion of food. Probiotics for biofloc fish farming improve the immune system of aquatic organisms by activating non-specific immune systems, boosting their defense against many diseases. Aquaculture is one of the fastest emerging food producing sectors of the world. Probiotics are used in aquaculture to improve growth performance, nutrition, decrease diseases and develop immune system.
